Looped and Knotted
Weaving-in Guide

Finishing your crochet with love and confidence.

Why Weave in Ends?
Weaving in ends secures your work, prevents unraveling, and gives your finished project a neat, polished look. It's the final stitch in your story - and it matters!

What You'll Need:
- Yarn needle (also called a tapestry needle)
- Scissors
- Your finished project

Step 1: Thread your yarn tail into the needle. Use a blunt-tip yarn needle and fold the yarn to slide it through easily.

Step 2: Weave in on the wrong side of your work.

Step 3: Follow the direction of your stitches. Weave through the top loops, around post stitches, or into the base - mimicking the path of your stitches to blend in.

Step 4: Change direction at least once. Go in one direction for about 1-2 inches, then turn and go back the other way. This locks the yarn in place.

Step 5: Trim the tail close. Once your end is secure, snip the extra yarn clos to the fabric - carefully!

Tips for Success
- For **single crochet**, weave through the top of the stitches.
- For **double crochet**, weave under the "posts" (vertical parts of the stitch)
- Don't pull too tight - you want the fabric to stay flat.
- Always weave ends into **similar color sections** for best camouflage

Bonus Encouragement

"Finishing is just the beginning of something beautiful."

Even if it's not perfect, taking time to finish your work with care makes all the difference. Be proud of every stitch - including the last one!
